CONTRIBUTION JOURNAL

1. JENNIFER R.

As contribution for this lab is first having everything prepared in GitHub, with all the files necessary that's needed to complete the lab and help organize the group with everything. Group members then all did the lab independently first so that we can collaborate the understanding of this lab to understand what this lesson of this module new machine. Then we collaborated and split the journal between members to have all insights included in GitHub. I started the introduction to start off the journal of what we all were introduced and learned/experience in the lab and added the references and closing of with the conclusion.

2. MARTIN H.

Reviewed the complete Module 3 Machine Learning assignment, including the machine learning workflow, data preparation, model training, evaluation, and results. Checked the completed work and studied the concepts and findings to understand the assignment thoroughly.

Reviewed the Logistic Regression and Decision Tree results and the overall conclusions of the Wine Classification project.

3. ZAYAAN A.

The contribution I did for the group was talking to my team about the requirements and how to go about the various tasks. In addition to that, I also assisted in the editing and organization of our files to ensure that everything was done in the right way. From the lab, I gained some insights into machine learning techniques, model comparison, and classification analysis, one of the difficulties I encountered was to understand why particular models worked better than other models. Overall, working with my team helped me better understand the lab and become more comfortable with machine learning.
